

# 01 / Master and delivery

STAGE24 / IMPLEMENTATION OUTPUT

## 01 / OUTLINED MASTER

Aa

A real vector output, with the glyph geometry retained.

Neutral sample. No customer identity. Not a website screen recording.

### **Start with the editable source.**

An editable text master depends on an installed, licensed font.

### **Outline a separate delivery asset.**

The outline preserves glyph geometry when the receiving system lacks the font.

### **Keep both assets.**

Delivery convenience does not replace the editable source.

## 02 / Check the real output

STAGE24 / IMPLEMENTATION OUTPUT

### 03 / DARK BACKGROUND

A separate light delivery asset, checked on a dark surface.

Neutral sample. No customer identity. Not a website screen recording.

#### **Inspect the small export at its actual size.**

A 32 px sample reveals losses that a large preview can conceal.

#### **Check a dark surface separately.**

Use a deliberately reviewed light asset rather than an accidental inversion.

#### **Record what the check proves.**

These are actual neutral vector outputs. Browser rendering, video seeking and PDF viewer interactions still need separate checks.
